

Tokyo Japan 2011, RISCON is the largest convention dedicated to risk and disaster management in Japan. This is the gathering of major players for defense, disaster relief, and

Pretender with RST and General Atomics, our booth was a smash hit. People flocked to our space to see what we do and how we can help. Many questions regard-

knowing, that we will be working hard in the next few weeks.

Kevin Wang, president and founder of PowerPlus, delivered a speech during RISCON to a group of highly motivated and important officials. Each of the group attendee's eyes and ears, along with many that were standing around the perimeter of the lectures hall, were intently fixed on Kevin as he talked about how PowerPlus can help serve the country of Japan and bring an end to their crisis. Immediately after the lecture ended, a flood of questions were asked about specifics and scheduling. This comes as a shock as normal Japanese protocol would have them ask such questions in private at a later time.

other parties that handle any and all catastrophes that can happen in Japan and in other neighboring countries as well. This year, PowerPlus was asked to give a lecture regarding nuclear crisis management and re-mediation. While in Japan we also gave an outstanding performance to specific governing bodies that play key roles in Japan's care.

ing radiation were asked and people were shocked as they learned about how it affects the area that they stood in. Sadly, even as exciting as the convention bustling seemed, it was also a reminder of how many people were being affected in such a short time. We generated a lot of interest which resulted in many leads. This has given us confidence,

Our technology is always under development and always on the cutting edge! As a leader in Nuclear Abatement, we try our best to educate our clients and warn them of possible harmful effects of their actions and inactions alike. However, it was just not enough. Scraping, the act of cutting into the ground and removing the ra-

BOOTH ACTIVITY WAS ENCOURAGING

diated material and storing it elsewhere, is a damaging and costly method of dealing with radioactive material. It costs money to rebuild, and the effects on the environment are staggering. The radiation inevitably leaks into the soil and water supplies rapidly spreading the contamination. The results can lead to a situation where the land is in no better or potentially worse condition than before they started. This is, unfortunately, where much of the land of Fukushima finds itself in. Having scrapped tons of land, they need to now handle tons of material which can not be shipped elsewhere. PowerPlus is leading the charge with developing a machine that incorporates our latest proven decontamination technology on a large scale that will allow us to clean all the contaminated soil and rubble left infecting the land.

So far, we are waiting to hear on what level they wish to proceed, and we will deliver.

Another disaster in the making is the practice of burning the waste material thinking that the heat will destroy the radiation. Unfortunately, it does not work that way! What ultimately winds up occurring is the re-release of radioactive contaminants into the air that settles again and adds to the already contaminated areas surrounding the plants and or wherever the winds carry the particles. It also contaminates the lungs of anyone unfortunate enough to breathe that same air. Suffice to say, we strongly encouraged them to cease and desist, but we are not sure if they have heeded to our warnings. In any event, we are also working to solve that problem as well, using the same new technology with a couple of

slight twists to accommodate the particulars of this new ash material.

Our results and abilities speak for themselves and so does our reputation it would seem. While in Japan, PowerPlus was asked to deliver a special demonstration to a governing office. We were met with a very rigorous inspection and identification verification. It would seem that even a former US President had underwent similar treatment to obtain entrance into this particular location.

We met with top officials from Japan for this demonstration and delivered an outstanding presentation. Even in the first moments, the Japanese technicians who thought their area was free of any radiation was amazed when our team found no less than 15 spots in their

CAR DECONTAMINATION RESULTS	Location	Initial (CPM)	1st Decon (CPM)	Final Decon (CPM)
	Front Rubber seal driver's side upper	190	160	30
	Front Rubber seal driver's side lower	266	180	32
	Front Rubber seal passenger's side lower	502	170	32
	Roof Right side rubber seal	256	140	60
	Roof Leftt side rubber seal	285	170	70
	Rear Hatch closed	90	50	32
	Rear Hatch opened Upper left hand corner seal	790	270	32
	Rear Hatch opened Upper right hand corner seal	970	170	30
	Rear Hatch opened lower left hand ledge	880	180	35
	Rear Hatch opened lower right hand ledge	540	170	70

immediate vicinity and were able to remove the contamination making it a good area for the real demonstration to happen. Our new technology has brought huge advances and even far surpassed our previous record breaking numbers. We brought in a car that had been towed in from deep within an affected area. The owner had plans to scrap the vehicle because it was unsafe to operate or store. His employees and friends had apparently also been pushing that he get rid of the car, to which eventually, the reluctant owner conceded. Fortunately, PowerPlus

was there! We began treatment of the car with our new techniques and ended up with outstanding results. We were able to completely restore the vehicle to usable condition and, as a bonus; all the yellowing that happens in headlights was completely removed making them look new! The owner was completely overwhelmed and gave a testimonial and rousing endorsement to a local TV crew outside.

During the day we met with several officials and had a very favorable meeting. It would seem that they would like to

put our equipment in different parts of the country, and have us teach them how to use that equipment. Education is always the most important thing you can have during any crisis. Power Plus is ready, willing, and able to equip, teach, and perform with Japan. For now we have entered into negotiations and are ramping up to fill the coming orders.

As you can see, there is much ground to be covered and time is always a factor. Our hopes are to finish negotiations and get our teams there and working as fast as possible. As always, we stand ready to help in any way we can.
